

Raceways have been redefining the concealed cable management category as an alternative to electrical conduit for close to a century. It's a great and affordable way to conceal and protect the cables in your home or office. Our cable raceways are available in different finishes as given below:

- PPRE-GALVANIZED
- HOT DIP GALVANIZED
- POWDER COATED

As per customer requirements, our raceways can be divided into the following sections with the help of "partition compartments":

- Power
- Communications
- Audio/visual (AV)

Due to its ease of installation, flexibility, and performance capabilities, various project consultants, builders, interior designers, and contractors are switching over to raceways instead of traditional conduits/panduit/casings. They come in different sizes and can be customized as per the client's requirements and are available in thicknesses starting from 18 SWG to 10 SWG.

At junctions, raceways can all be joined/divided with the help of easy-to-install 4-way junction boxes customized for every size of raceway. These are 4-way JBs concealed with top & side removable plates which can be opened for fixing. So, 1 JB can do the work of a Tee/Cross/Straight Joiner. The top removable plate can be cut out to make provisions for fixing power sockets & switches. Covers of raceways are provided with 8 nos of screws to tighten the cover.
